The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments with respect to claims 1-21 and 23-38 have been considered but they are not persuasive. Applicant's argument with respect to these claims are that none of the cited references single or in combination teach or suggest, "an index value which provides an indication of whether a multimedia message is new multimedia message or a previously send multimedia message and based on a comparison of the index value in the information received from the user agent and the index value set in the stored multimedia message", as well as, "header information is received without a multimedia portion of the multimedia message and determining how to communicate the multimedia message including said multimedia portion based on the header information received without said multimedia portion". It is Examiner's position that such limitations are taught or suggested within cited references and therefore Examiner disagrees with Applicant's arguments. As cited in detailed action previously, Barrus teaches or suggests an index value which provides an indication of whether a multimedia message is new multimedia message or a previously send multimedia message and based on a comparison of the index value in the information received from the user agent and the index value set in the stored multimedia message [see Barrus, col. 24, lines 35-58 also figures 3, 16 and the details associated; wherein method for creating a new message or replying to an existing one is described and Takahashi: abstract, col. 18, lines 56-64, figures 14 a-c and details associated], as well as, "header information is received without a multimedia portion of the multimedia message and determining how to communicate the multimedia message including said multimedia portion based on the header information received without said multimedia portion" [see Takahashi: col. 9, lines 7-42, figures 1, 8 and details associated; wherein transmitting header information details are described]. Therefore it is Examiner's position that such limitations are taught or suggested by cited references and 35 U.S.C 103(a) rejection to claims 1-21 and 23-38 is proper. The breath of the claims allows for such an interpretation. Applicant employs broad language which includes the use of words and phrases which have broad meaning in the art. In addition, Applicant has not argued any narrower interpretation of the claim language, nor amended the claims significantly enough to construe a narrower meaning to the limitations. As the claims breath allows multiple interpretations and meaning which are broader than Applicant's disclosure, the Examiner is forced to interpret the claim limitations as broadly as reasonably possible, in determining patentability of the disclosed invention. Again, claims are interpreted in light of the specification; limitations from the specification are not read into the claims. See *In re Van Geuns*, 998 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).
